

VoteLynx LT Electronic Meeting Manager

VoteLynx LT is a simple to use, non-computer based roll call voting system. The complete package includes Master Vote Control Panel with vote and timer controls, Voting Panels and Video Display Unit. LT is perfect for city councils, legislatures, and boardrooms where rugged reliability is required without the necessity of agenda management and data archiving. VoteLynx displays voting activity on video screens, cable TV channels or optional light displays. With its flexible configuration, VoteLynx is the perfect choice for almost any meeting scenario.

When the need for detailed record keeping occurs, LT is fully upgradable to a computer based SE or XL system featuring powerful data management tools. This built in system flexibility guarantees that VoteLynx easily expands as your needs change and grow, without fear of obsolescence.

Features
